

Supply Chain in real life!

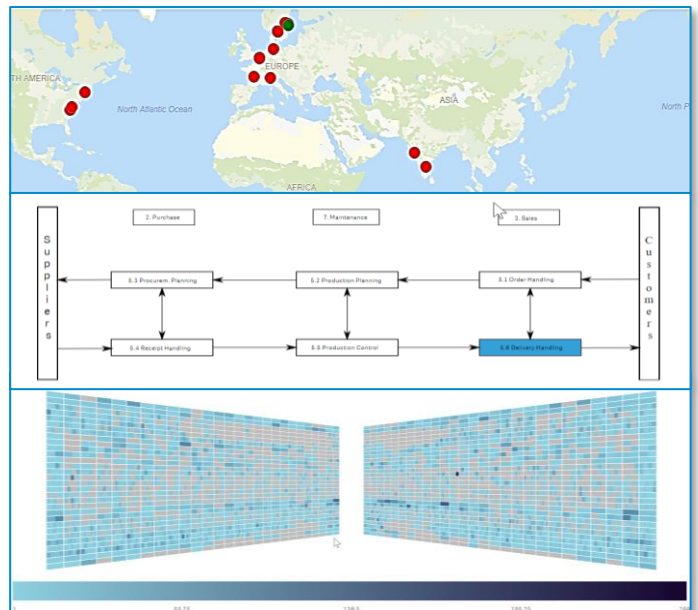

Meridion has together with Chalmers University of Technology performed webinars, where studies have been presented regarding Swedish companies' knowledge and usage of planning parameters in their business systems. It has shown that several companies are lacking a clear and well thought-out strategy, and that most aren't updating their data in order to stay up to date.

The Analysis

By analyzing and visualizing data from a customer's supply chain on a global, tactical and operational level, Meridion can promptly determine where risks and potentials for revenue exist.

Meridion can efficiently control the performance of a company and compare it with others in the industry.

With this as a foundation, decisions can be made in the company regarding operational improvements which has the biggest impact.

Meridion has a global customer base with customers from multiple industries

The Benefits

-  Reduced tied up capital
-  Lower planning costs
-  Increase revenue
-  Updated data and better understanding of the supply chain

The Offering

-  We analyze your data during one day
-  A joint workshop for 2 people during 4 hours
 - Analysis of your data
 - Possible adjustment and updated analysis
 - Listing of improvement proposals
-  You provide access (ODBC) to your M3 database or an extract on a fileserver
